

Italian Kart Racing – The User Guide

How to Set Up

To set up this project, please download the project and open the directory in your choice of terminal. Follow this article if you need help:

<https://www.ibm.com/docs/en/aix/7.1.0?topic=directories-changing-another-directory-cd-command>

If you do not have [Node.js](#). Please install it at this point.

Then run the following commands:

Npm install – this downloads all the dependencies for the project

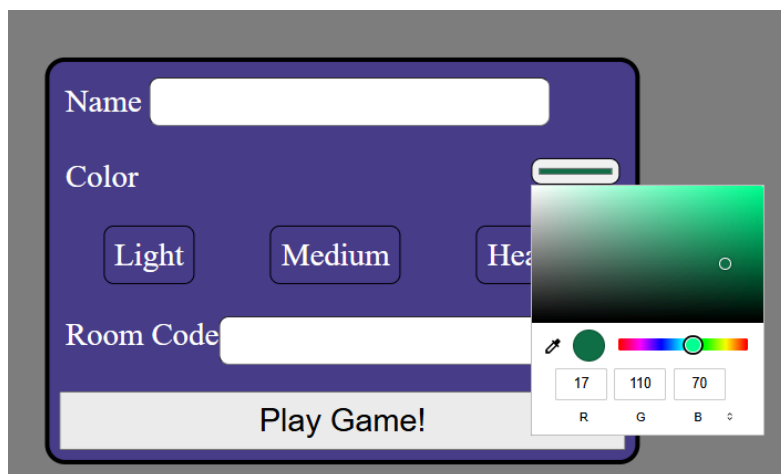

Npm Run Dev — This starts the server.

And thats it! – The game will now open in your browser.

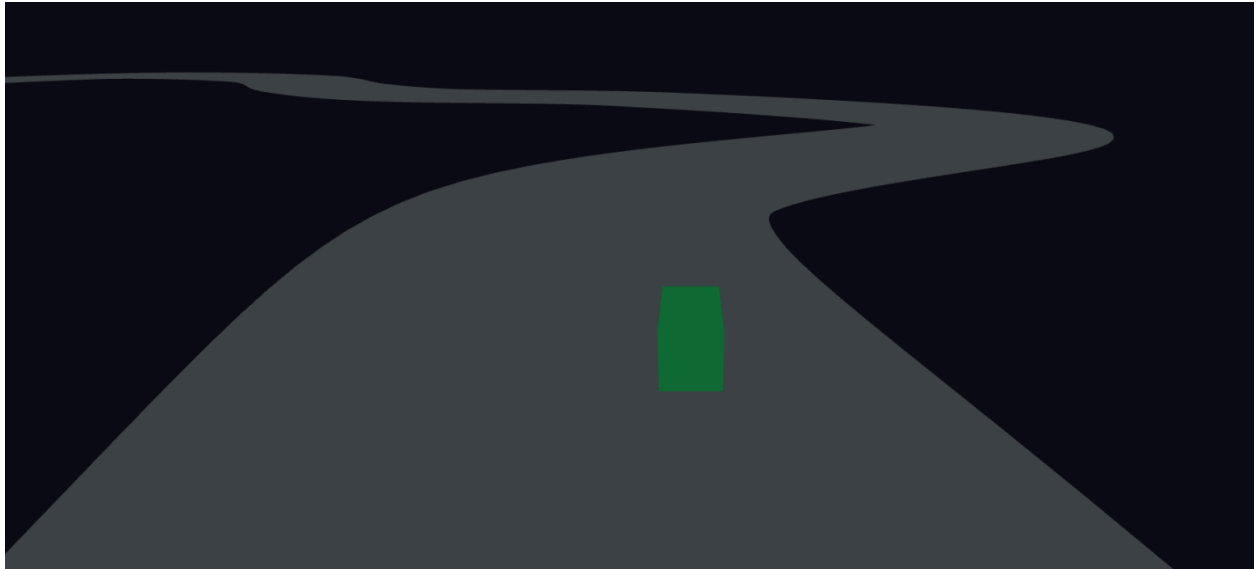

How to Play

When you start the game, you will be taken to the intro page. Filling out information will allow you to personalize your experience. If you want to play with specific friends, you can create/join a room code for all of you to be in.

You can also choose the type of car: Light, Medium, or Heavy. All have their advantages, but even though Light might be the fastest, and Heavy might have the best handling, they all require a skillful driver.

On spawning, you can use the arrow keys on your keyboard to move forward, turn right, turn left, and deaccelerate.

In the current infinite freeplay mode, you have full control to do as you want. Whether you want to race or play games, it's up to you! Have fun, and have fun being your own referee!
